Dear Sirs, As Discovery Bay Residents we are concerned that the twin tunnel project will make our community non accessible to and from our community due to construction of this project. Next there is no study that shows that the removal of freshest water above Sacramento will contribute to less dilution of pollution from sewer treatment plants that dump into the rivers, storm water run off and pump down of islands with sediment and pollution from pesticides. This project has been ramrodded through the legal review process without proper input from residents and detailed environmental reports. Peter Schneider
